

DONA UN VERO 'LIFT'
ed un effetto di lunga durata

TIPI DI THREAD

Materiale - Polydioxanone (PDO)

AREE DI TRATTAMENTO

VISO

Fronte, Metà volto (guance), Linee mascella, Naso

COLLO

Tightening, lifting

RUGHE SPECIFICHE

Glabella, Zampe di gallina, Nasolabiali, Indiani, rughe sottili

SENO

Rassodante, modellante.

ALOPECIA

SOLLEVAMENTO INTERNO COSCE

OBESITÀ

Braccia, Addome, Fianchi ecc.

DOLORE

Punti IMS

RESULTS

Aesthetic improvement was noted in all groups at 1 month, measurable results persisted to the end of the study for all but the group that underwent the thread-lift procedure only.

Aesthetic improvement scores of the non-thread-lift control group were better than the group that underwent thread-lift only. Similarly, when the thread-lift was combined with other procedures, scores were better than when thread-lift was used alone. Statistical significance was demonstrated in both of these comparisons.

Figure 1. Thread-lift only after 22month(D)

Figure 2. Thread-lift with additional procedures. after 12month(D)

Figure 3. Control after 14month(D)

Le suture assorbibili di lunga durata, sono efficaci come quelle non assorbibili, e la tecnica per via sottocutanea è più efficace rispetto alla tecnica transcutanea.
